Construction of new sections on TENP I pipeline system in the context of the NDP 2018

In addition to the information already published on 27th September 2017, 21st March 2018 and 4th June 2018 regarding the situation of the TENP I pipeline (temporary capacity restriction), Fluxys TENP and OGE publish hereby the following update.

In order to ensure the security of supply needs resulting from the “German Network Development Plan for gas 2018-2028” (NDP 2018), OGE and Fluxys TENP in their function as shareholders of TENP KG have decided to build new pipeline sections between Mittelbrunn-Schwanheim and Hugelheim-Tannenkirch, as well as the necessary connections to the TENP II pipeline. The measures will be included in the NDP 2018. Under the currently ongoing maintenance measure no. 21019101 investigations of the remaining TENP I sections are proceeding. At the side of OGE, a capacity of approx. 3.5 million kWh/h will be available at entry Bocholtz and of approx. 3.6 million kWh/h at exit Wallbach from 01.10.2020 onwards, unless otherwise indicated.

OGE and Fluxys TENP will continue to duly and timely inform the market about any new development regarding the above.
